

Let's summarize our conversation to ensure we're on the same page before we end.

## Coaching Conversation Summary

### ### Key Goals

- Successfully implement hands-free voice-activated functionality in the AI code.
- Achieve a conversational interaction with the AI where it can effectively address user-presented problems.

### ### Major Breakthroughs

- Identified two potential causes for the hands-free mode malfunction: overlapping voices and difficulty detecting the user's voice during conversations.
- Developed a plan to test each potential cause and confirm the root issue.

### ### Actionable Next Steps

- Conduct manual testing to isolate the problem.
- Test voice detection capabilities with specific phrases and evaluate the AI's responses.
- Define a specific problem to present to the AI and determine the criteria for a successful response.
- Measure success based on the AI accurately addressing the specified problem.

Is there anything else I can help with before we conclude this session?
